

Mario Agban

Los Angeles, CA • (661) 877-1621 • mario.agban@berkeley.edu • [Portfolio](#) • [LinkedIn](#) • [Github](#)

Education

University of California, Berkeley

Bachelor of Science in Applied Mathematics and Data Science

GPA: 3.66

2018-2022

Berkeley, CA

Georgia Institute of Technology

Masters of Science in Data Science & Analytics

2026

Atlanta, GA

Experience

Regional Data Coordinator

[Citizens of the World, Los Angeles](#)

Oct 2024–Present

Los Angeles, CA

- Manage Aeries and multiple learning platforms across 5 charter schools serving 3,000+ students, integrating enrollment, assessment, and compliance data to improve cross-system reporting and operational visibility.
- Lead CALPADS, CRDC, SARC, and state/federal reporting, validating large student datasets, resolving data discrepancies, and strengthening accuracy and readiness for regulatory submissions.
- Build and maintain dbt and BigQuery data models that transform operational data into decision-ready reporting, powering 50+ active Tableau dashboards used to monitor assessment, enrollment, and school performance.

Analytics Engineer Fellow

[Modern Data Lab](#)

Jul 2022–Oct 2024

Los Angeles, CA

- Built SQL and dbt data models across BigQuery, Snowflake, and PostgreSQL, transforming raw datasets into reliable, analytics-ready tables for scalable reporting and performance analysis.
- Developed Tableau and Looker dashboards to track KPIs, identify performance trends, validate key metrics, and translate data into actionable insights for stakeholder decision-making.

Data Analyst Intern

[Purdue University](#)

Apr 2022–Jul 2022

West Lafayette, IN

- Analyzed COVID-19, mobility, and venue datasets using Python, Pandas, NumPy, and the Foursquare API to identify geographic patterns and potential drivers of case concentration.
- Built geospatial visualizations and clustering models to segment locations, uncover spatial trends, and evaluate relationships between venue activity and infection patterns.
- Ranked venue categories by their estimated association with COVID-19 case concentration, translating complex spatial analysis into clear, decision-oriented findings.

Data Analyst Intern

[LEED U.S. Green Building Council](#)

Sep 2021–Dec 2021

Washington, DC

- Queried and analyzed enterprise datasets in MySQL to identify reporting gaps, data quality issues, performance trends, and correlations, improving the reliability of downstream analysis and reporting.
- Built Power BI dashboards for cross-functional business, application, programming, and analytics teams, supporting the migration of 38% of reporting data from Yellowfin to Power BI.

Data Analyst Intern

[Carpe Med Travel](#)

Jun 2021–Sep 2021

San Francisco, CA

- Extracted, scraped, and cleaned hospital datasets from CSV and JSON sources, standardizing raw data for downstream analysis and visualization.
- Built ETL-style pipelines to automate data extraction, transformation, and loading, improving the consistency and repeatability of data preparation.
- Prepared structured, analysis-ready datasets used to create heat map visualizations and identify geographic patterns in hospital data.

Skills

Languages: SQL, Python, R, JavaScript, HTML/CSS

Analytics & BI: Tableau, Power BI, Looker, Google Analytics

Data Tools: PostgreSQL, Snowflake, dbt, Fivetran, Jupyter Notebook, MySQL Workbench

Python/R Libraries: Pandas, NumPy, Matplotlib, Seaborn, Plotly, SciPy, scikit-learn, ggplot2

Methods: A/B Testing, Confidence Intervals, Regression, Data Cleaning, Dashboarding
